

Human risk as a compliance driver

Why it matters: Organisations are increasingly expected to evidence awareness and policy acknowledgement, not rely on one-off training.

Expectations: Frameworks such as **POPIA (South Africa)** and regional privacy laws increasingly expect documented controls and audit-ready records.

Where organisations struggle: One-off training, fragmented evidence, no acceptance records, limited visibility.

How usecase helps:

Ongoing training + phishing

Keeps awareness current and creates measurable evidence over time

Centralised policy management

Distribute policies and capture eSign acknowledgement in one place

Human Risk Score + reporting

Exportable, board-ready outputs for auditors and evidence logs for auditors and stakeholders

Quick cloud deployment

Microsoft 365 or Google Workspace sync, no installs

Outcome: Reliable, cross-border human-risk evidence for audits and reviews.
