Human risk as a compliance driver

Human behaviour plays a significant role in meeting APAC privacy and security expectations. Organisations are increasingly expected to show awareness, policy acknowledgement, and behavioural oversight.

What's driving requirements

Regional frameworks increasingly expect continuous awareness and auditable evidence:

- **China CSL + India DPDP:** governance, documented handling practices, and records that support compliance

- **Japan APPI + Singapore requirements:** policy acknowledgement and audit evidence of risk management

- **SEA privacy laws (PDPA/PDP):** consistent evidence over personal data handling across teams and locations

---

◎ Where organisations struggle

- Limited IT time to manage ongoing training, policy sign-off, and reporting alongside day-to-day operations
- Outdated annual training that doesn't stand up to audits or customer reviews
- Policy acceptance scattered across inboxes and folders, making proof hard to produce on demand
- Evidence spread across tools, creating manual work and slowing audits and assurance requests

---

How We Support Your Compliance Evidence

☑ **Ongoing training + phishing**	☑ **Centralised policy management**	☑ **Human Risk Score + reporting**	☑ **Quick cloud deployment**
Automated programmes with measurable participation and improvement	Distribute policies and capture eSign acknowledgement in one place	Exportable, board-ready outputs for auditors and evidence logs for auditors and stakeholders	Microsoft 365 or Google Workspace sync, no installs

Begin your human-risk review
A short assessment to benchmark your evidence posture and define next steps.
